

MongoDB Enterprise Advanced Datasheet

More than a thousand organizations around the world use MongoDB Enterprise Advanced, including more than half of the Fortune 100. It includes MongoDB Enterprise Server, the commercial edition of the database, as well as support, a management platform, certifications, and other components. MongoDB Enterprise Advanced is designed for the way you do business.

Benefits

MongoDB Enterprise Advanced enables you to be as agile and scalable as a startup while addressing the more demanding requirements of the modern enterprise. MongoDB Enterprise Advanced helps you:

- **Secure Your Business.** MongoDB Enterprise Advanced includes advanced security and certifications that help you to secure the data that drives your business. Authentication, authorization, encryption, and auditing features provide the capabilities required for the modern enterprise.
- **Move Faster.** A global telco improved time to market by over 4x with MongoDB Enterprise Advanced. Your teams can ship code in weeks or months instead of quarters or years. The expertise provided by our support teams and the advanced features get you to production faster.
- **Reduce Costs.** Ops Manager provides a solution for backup, recovery, and monitoring of your deployment, saving you time and money. Support helps you eliminate application downtime. A leading insurance customer found that for every hour of reduced application downtime, it saved over \$150,000.

What's Inside?

- **Advanced Security.** MongoDB Enterprise Server meets security and compliance standards with Kerberos and LDAP authentication, audit trails for forensic analysis, and encryption of data at-rest, all natively integrated to the database. The MongoDB Enterprise Server features are complemented by Role-Based Access Control, PKI certificates, TLS/SSL encryption, Read-only Views, and Field-Level Redaction
- **Management.** Our management platforms make it fast and easy for operations teams to provision, monitor, back up, and scale MongoDB. With MongoDB Enterprise Advanced, you get your choice of either Ops Manager (to run on your own infrastructure) or Cloud Manager (delivered by us as a cloud service).
- **In-Memory Speed.** The In-Memory Storage Engine delivers the extreme throughput and predictable latency required by the most demanding applications in AdTech, finance, telecoms, e-commerce, and more.
- **Intuitive GUI.** MongoDB Compass, available with MongoDB Enterprise Advanced, is the easiest way to explore and manipulate your MongoDB data. It allows you to quickly visualize and explore your schema, run ad hoc queries, update and delete documents, view real-time usage statistics, and build document validation rules.
- **Advanced Analytics.** The MongoDB Connector for BI lets you use MongoDB as a data source for your SQL-based BI and analytics platforms. Seamlessly create the visualizations and dashboards that will help you extract the insights and hidden value in your multi-structured data.

- **Proactive Support.** MongoDB Enterprise Advanced provides access to proactive, consultative support. The same team that builds the database itself helps you throughout your entire application lifecycle. Customers can ask MongoDB experts an unlimited number of questions, 24 x 365, globally. And support includes emergency patches for MongoDB.
- **Commercial License and Indemnification.** MongoDB Enterprise Advanced includes a commercial license to meet the needs of organizations that have policies requiring one, including commercial distributors (OEMs). We also provide a warranty and indemnification.
- **On-Demand Training.** Access to our online training, and at your pace. Developers and ops teams can improve their MongoDB skills on demand from wherever they want, whenever it fits their schedule. [On-site training](#) is also available.

MongoDB Enterprise Advanced Features	
Ops Manager <i>or</i> Cloud Manager Premium	✓
Red Hat Identity Management Certification	✓
Kerberos & LDAP Authentication; LDAP Authorization	✓
Auditing	✓
SNMP Support	✓
Encrypted Storage Engine	✓
In-Memory Storage Engine	✓
MongoDB Compass	✓
Advanced Analytics	✓
Platform Certifications: Windows, RedHat/CentOS, Ubuntu, Amazon Linux, Linux on z Systems, LinuxOne, Linux on Power Systems	✓
Private, On-Demand Training	✓
Support SLA	1 hour
Support Availability	24 x 365
Emergency Patches	✓
Commercial License, Warranty, and Indemnification	✓
